DETAILED ACTION

Double Patenting

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claim 1 is rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-19 of U.S. Patent No. 6,716,332. Although the conflicting claims are not identical, they are not patentably distinct from each other because claim 1 is broader than the claims of the patent and encompasses the subject matter of the patented claims. Claim 1 of the patent recites the step of "using a retainer to hold a substrate" while instant claim 1 recites the step of "providing a substrate". Claim 1 of the patent additionally refers to "said retainer" in the last two paragraphs of the claim. These references have been omitted from instant claim 1.

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Sachs et al (5,512,162) disclose the step of reducing the gas content of an electroless plating solution before plating is begun so that the solution has the capacity to accept as much hydrogen as possible during the process by dissolving the bubbles that are formed in the solution. See column 14, lines 49-60. Sachs et al relates to treatment of the plating solution rather than a pretreatment solution. Hackett (5,368,634) was cited in the Information Disclosure Statement filed by applicant on February 18, 2004. Hackett discloses immersing substrates such as semiconductor wafers with small cavities in a liquid medium, and repeatedly applying a vacuum and then venting to draw bubbles from the cavities. Hackett does not suggest using a deaerating device to deaerate dissolved gas in a preprocessing solution, supplying the deaerated preprocessing solution from the deaerating device to a preprocessing bath, and contacting the surface of substrates to be plated with the deaerated preprocessing solution the preprocessing bath to absorb bubbles into the deaerated preprocessing solution and then plating.

4. Claim 1 would be allowable if the double patent rejection is overcome.

5. The following is a statement of reasons for the indication of allowable subject matter: Claim 1 is considered to be allowable over the prior art for the reasons developed during prosecution of 6,716,332.
